

ReIMS Web Edition

Let your customers fill out a quotation over the web

Seamlessly integrates with ReIMS by enabling the customer to input all the origin and destination criteria along with inventory items on your website. The details of the quote are then distributed to your sales person's territory when they sync up with the database. All details are filled out and a price is ready for the customer, the only thing left is to confirm the items and book the job!

Unlike other web based quotation systems there is no duplicate data entry for the salesperson.

Features

- Seamlessly integrates with ReIMS Estimating software.
- Inventories are pulled from ReIMS Estimating software database.
- Integrates with your own or customize it as your primary website.
- Multimedia presentations are pulled with each individual item from the database.
- Gives your customers an opportunity to fill their own survey out.
- More leads.
- Quote information is automatically imported into ReIMS and distributed by zip code.
- Create user end user profiles so that quotations can be partially saved and completed at a later time.

Take it for a test drive. <http://www.relms-online.com/>

Server Requirements

IIS web server

ASP.Net Framework 2.0
