

# ReIMS Exchange

Optional Module for ReIMS (

Enterprise

Edition)

ReIMS harnesses your investment in existing financial and operational software systems by providing ReIMS Exchange to allow seamless interaction and exchange of information between your critical systems.

## Overview

This robust server-based process allows import and export of XML data files at periodic intervals (minimum of 1 minute) from preset Import and Export folders. Once processed, these XML files are moved to corresponding archive folders. Thus, data is seamlessly shared between all your critical systems. ReIMS Exchange has many fail-safes built in and can be set to automatically email multiple individuals in case of unexpected conditions.

ReIMS Holdings Pty Ltd provides consultancy and custom programming services to tailor ReIMS Exchange to your specific needs. This may include direct update of external databases rather than exchange process via intermediate XML files. Furthermore other data exchange formats such as CSV can be accommodated.

## System Requirements

ReIMS (

Enterprise

Edition)
