

ReIMS 400N

Optional Module for ReIMS (Professional Edition) and ReIMS (Enterprise Edition)

Optional Module for ReIMS (Professional Edition) and ReIMS (Enterprise Edition) for US-based companies that need to comply with 400N Tariff regulations, the ReIMS 400N component acts as a two-way communication bridge between ReIMS and AMSA's eTariff 400N software.

Features

1. ReIMS seamlessly transfers the quotation, inventory and packing data it has captured to the ReIMS400N bridging component.
2. ReIMS 400N then launches eTariff 400N and communicates the ReIMS data to it and loads the quote within eTariff 400N.
3. Once eTariff 400N has performed its calculations and the quote is saved, ReIMS 400N communicates the 400N Tariff results back to ReIMS.

System Requirements

ReIMS (Professional Edition) or ReIMS (Enterprise Edition)
