ReIMS ver: 4.0.1 Release 1

Release Date: 16 November 2007

New Features:

1. Pricing type 'None' for job types - removes pricing tabs & customer quotes
2. Availability of numeric keypads controlled via new optional key, "NumericPads", in registry files...
"NumericPads"=dword:00000001 (numeric pads On - this is the default setting if this key is not defined in the registry)
"NumericPads"=dword:00000000 (numeric pads Off)
(Note: date and time pads are always available as before)
3. Automatic reconnection and continuation whenever connection to the server drops out due to network/internet hiccups
(before, users had to close ReIMS using Ctrl-Alt-Del - now users simply check to ensure their LAN or VPN connection to the ReIMS server is up, then press OK to the notification message and keep working)
4. Re-labelling of some outstanding job types etc.
5. Move Survey Date is not displayed for Move 1 as the Quote Survey Date represents the same date. The Move Survey Date is available for Moves 2 onwards (so long as the move mode is not 1->Many where only 1 inspection is conducted)
